

With over 10 years of experience in the logistics sector of which 5 in CIS, covering various aspects for a wide range of customers, I built a thorough knowledge in the field of Supply Chain.

I consider Supply Chain as a relay race of goods, information and money, with a continuous strive to get to the finish line better/faster/cheaper.

Throughout my career I always had a figure driven and analytical approach and was continuously looking to IT solutions to make processes more secure, error-proof, efficient, transparent, ...

Last year I decided once again to get out of my comfort zone and take up the challenge as an IT and Innovation director within Ahlers Russia as in our current world the importance of IT grows every day.

In this function I try to build bridges between the business and IT departments, trying to translate business into real IT solutions and vice versa. We do this by testing and scaling cloud technologie, apps, smart data analysis, drones, 3d printing, VR,...

I would like to join the SPIBA Innovation and Intellectual Systems committee to build bridges not only within the Ahlers eco-system, but to go beyond this. I expect to get inspired and to inspire others, to share best practices, but also failures and learn from each other.
